

Perforated Sliding Shutters

Perforated Sliding Shutters regulate light and heat and at the same time bring an architectural element to the facade. The application of perforated aluminium sheet provides the required shading and allows an open view to the surroundings outside. By choosing a specific perforation or even designing a custom pattern for the building the architectural possibilities are endless.

Key features

- Sliding shutter in aluminium perforated sheet
- Frameless, lightweight panel
- Great freedom of design in perforation pattern
- Totally weather resistant and maintenance free panel
- Manual application or reliable motorisation to increase functionality
- Reliable Building Elegance sliding accessories.
